Professional Summary

QA Engineer with approximately one year of experience testing healthcare applications across Android, iOS, and web workflows. Built Android regression automation using Java, Appium, TestNG and Page Object Model; tested an in-app AI customer-support chatbot. Experience in release verification, API-to-database validation, AI-assisted Python test-data tooling and SQL integrity checks.

Technical Skills

Test Engineering: Manual testing, test design and strategy; functional, integration, regression, system, smoke/sanity, compatibility and exploratory testing; UAT concepts, defect lifecycle and root-cause analysis (RCA).

Automation: Java, Selenium WebDriver, Appium, TestNG, Page Object Model (POM), Maven; ADB, UiAutomator2, Android emulators (AVD) and physical devices.

API & Backend: Postman, REST API investigation, persistence verification; REST Assured, contract and JSON schema validation, authentication and negative-path testing concepts.

Languages & Data: Java, Python, SQL; MySQL/MariaDB; joins, subqueries, aggregation and data-integrity checks.

Tools: Git, GitHub, ClickUp, Jira, Firebase Crashlytics, Android Studio, logcat, Xcode and Figma.

AI in QA: AI-assisted test-case and bug-report generation; customer-support chatbot functional testing and response accuracy checks; intent coverage and fallback-handling concepts.

AI Tooling & Learning: Claude Code, GitHub Copilot. Currently building skills in Playwright, GitHub Actions CI and Docker.

Professional Experience

QA Engineer – Janitri Innovations **Oct 2025 – Nov 2026**
Bangalore, India

- Supported QA sign-off for JFH releases; maintained the revamp bug sheet, documented defects and verified fixes across Android builds and tablets.
- Investigated create-patient API behavior across five patients; identified HTTP 200 responses that discarded nine submitted fields and the doctor ID, and confirmed missing values through database checks.
- Designed approximately 120 JFH test cases in ClickUp and maintained defect documentation for developer follow-up.
- Performed chatbot functional testing and reported four defects involving link navigation, OTP resend cooldown, timestamps and phone-number validation; all were subsequently fixed.
- Contributed to QA across JFH Android, JFM Android/iOS and Central Monitoring; participated in QA and mobile candidate interviews.

Selected Engineering Contributions at Janitri

Python Test-Data Generation / *Python, REST APIs, MySQL*

- Developed synthetic patient-data generators with AI assistance for development and beta environments, guided by algorithm-team CTG documentation.
- Completed a beta run generating 20 patients, 40 sessions, 717 datasets and 486 BP visits in 86 minutes; run logs recorded 200 hours of synthetic monitoring data.
- Validated a workaround for large-upload persistence failures using 20-minute chunks; completed a separate 68-call upload run with subsequent SQL integrity checks.

SQL Data-Integrity Validation / *MySQL*

- Developed checks for dataset completeness, expected channel records, orphaned rows, BP readings, session duration, scheduling overlaps and saved doctor associations.
- Corrected the generator's overlapping-session logic and added a guard query; corrected a false CLEAN result for patients with no datasets by introducing an EMPTY result.

Android UI Automation Framework & Locator Standard / *Java, Appium, ADB, UiAutomator2, TestNG*

- Designed and implemented Android regression automation using TestNG and Page Object Model, with a configurable driver factory and reusable utilities for explicit/fluent waits, screenshots, gestures, assertions and test data.
- Executed tests on Android emulators and physical handsets/tablets; used ADB scripts for device setup, app install/reset, teardown and per-run logcat capture to support repeatable execution.
- Audited captured screens from JFH and JFM using UiAutomator XML; documented resource-ID gaps, automation-readiness scores, locator priorities and feature-prefixed snake_case naming recommendations.

AI-Assisted QA Tooling & Conversational-Feature Testing / *Claude Code, custom agent skills*

- Built reusable AI agent skills to generate structured test cases, bug reports and standardized QA documents from specifications, API payloads and UI captures, following team templates.
- Tested the app's AI customer-support chatbot to check whether users received relevant, accurate answers to app-related questions and issues; documented response problems and functional defects for developer follow-up.

Education

The Oxford College of Engineering 2021 – 2025
Bachelor of Engineering, Computer Science | CGPA: 8.6/10 Bangalore, India
